ANNEX 3 EVENTS PLANNED TO BE ATTENDED BY PARTNERS	46

1. Executive summary

This deliverable provides an account of all dissemination activities carried out by LoCloud during months 1 to 24 of the project.

LoCloud supports small and medium-sized institutions in making their content and metadata available within Europeana, by exploring the potential of cloud computing technologies. To achieve this, the project has developed a cloud-based technology infrastructure to enable the aggregation of local cultural content. It is also developing a number of micro-services to help reduce technical, semantic and skills barriers, and to render the content more discoverable and interoperable.

A dissemination strategy was set out at the inception of the project in the Dissemination Plan (D6.1). It aimed to raise awareness about the LoCloud project and its activities amongst:

- Internal stakeholders within the partner organisations.
- Organisations with an interest in cloud computing, applied to small and medium sized institutions, including small and medium sized cultural heritage institutions, holders of private collections, and others.
- The Research Community with an interest and involvement in cloud computing in general, and to cultural institutions in particular.
- The European Commission's CIP ICT PSP programme and related projects funded by the programme.
- Users of Europeana, members of the general public, students, researchers, etc.

The objectives of the dissemination strategy are to:

- Identify the interests of the stakeholder community, and the main channels for communication and networking activities.
- Build and extend the project contact database by clustering with other projects, participating in events, and exploiting the partners' networks of contacts.
- Informing the stakeholder community about news, events and activities by developing a project newsletter, exploiting social networking channels, as well as traditional media.
- Providing an up-to-date set of dissemination materials by developing the project website, briefing papers, presentation template, and other materials for use by the partners.
- Presenting the project at relevant national and international events.

These objectives will also be pursued in the second period of LoCloud, until the end of the project. A final dissemination report, due in month 36, will provide an account of all the dissemination and promotional activities carried out by the partners throughout the entire project duration.

Section 2 of this report describes the project dissemination activities carried out, and promotional materials produced during year 1 and 2.

Section 3 provides an overview of planned dissemination activities until the end of the project.

2. Dissemination activities

This section provides a review of all dissemination activities carried out during months 1-24. It describes first the audiences targeted for dissemination, the means and resources used to promote the project progress and their result, and the actual activities carried out to reach the identified audiences.

2.1 Involving stakeholder communities

The following stakeholders were identified as target groups in the initial dissemination plan:

- internal stakeholders within the partner organisations;
- organisations with an interest in cloud computing applied to small and medium sized institutions, such as small and medium sized cultural heritage institutions, national and domain aggregation services, holders of private collections, Europeana, and others;
- research communities with a general interest and involvement in cloud computing, and a particular interest as applied to cultural institutions;
- the European Commission's CIP ICT PSP programme and related projects funded by the programme;
- Europeana, end users of Europeana (e.g. students, researchers, etc).

All LoCloud partners have been actively engaged in promoting LoCloud both with their internal stakeholders and external audiences, targeting the communities of small cultural institutions, researchers, and companies working in the domain of cloud computing, specifically for small institutions. These audiences have been reached mainly through presentations by partners at various national and international events, as well as via their mailing lists and social media.

There has been a regular and mutual exchange of information between LoCloud and Europeana. LoCloud participated in the Europeana group projects meetings, as well as in the EuropeanaTech conference, which took place in Paris on 13-14 February, 2015 (see below).

The Europeana office maintains the Europeana group web site (<http://group.europeana.eu>) and disseminates information about projects, including LoCloud, to its stakeholder community through the website, a quarterly newsletter, and its news channel. The office also maintains a calendar of events informing group members about upcoming events, inviting participation in clustering activities, and disseminating information about the project's participation in international conferences and events.

LoCloud has followed the work of, and exchanged information with, Europeana Cloud¹, Europeana Creative² and Europeana Inside³. This is done mainly via the exchange of news, with occasional virtual and face-to-face meetings. Europeana Cloud set up a 'Cloud Coordination Group', whose aim is to coordinate those projects working on cloud-based applications for the storage, retrieval and manipulation of metadata and digital content within

¹ <http://pro.europeana.eu/web/europeana-cloud>

² <http://pro.europeana.eu/web/europeana-creative>

³ <http://www.europeana-inside.eu/home/index.html>

the context of Europeana. There was a virtual meeting of this group in June 2013, but there have been no subsequent meetings. However, there is regular dialogue between LoCloud and Europeana Cloud.

LoCloud has also exchanged news and information on the results of the project with the 3D ICONS project. The infrastructure model developed within the CARARE project and used by 3D ICONS (involving the MINT ingestion service and the MoRe repository), is the fundamental basis upon which LoCloud's work has been developed.

LoCloud is in the process of discussing a Cooperation Agreement with AthenaPlus, a CIP best practice network which aims to contribute more than three million metadata records to Europeana, improve search, retrieval and re-use of Europeana's content, and experiment with enriched metadata, with their re-use adapted for users with different needs.

The LoCloud project web site allows stakeholders to register to receive the project newsletter, with updates on progress and results. This has enabled the building of a contact database, which will continue to be enlarged throughout the project. Currently the database includes 92 subscribers of which 89 subscribed to the LoCloud newsletter. This will surely be expanded in the coming period, as a result of the extensive dissemination activities that partners will be carrying out, including promoting the services and tools developed by the project.

2.2 Events

There have been a large number of presentations by partners at conferences, seminars and workshops within the local heritage and professional domains, with the aim of promoting the results of the project, and advocating the contribution of content/metadata to Europeana. Below are a few highlights of main events organised by LoCloud, or with a substantial project presence, during the reporting period. The full list of events is available as Annex 1 to this report.

EuroMed2014, 3-8 November 2014, Lemessos, Cyprus

Organised by the Cyprus University of Technology, with the support of Athena Research and Innovation Center (both LoCloud partners). Opened by the Minister of Education and Culture, Costas Kadis, it gathered more than 17 small local stakeholders, willing to contribute more than 3,000 digital objects to Europeana. The event was attended by 350 participants from 38 different countries, and was a success. A total of 432 papers were submitted to the conference.

ICOMOS Workshop, ICOMOS 18th General Assembly, 11 November 2014, Florence, Italy

This workshop was organised as part of WP 6, by the University of York and the National Archives of Norway.

LoCloud partners at the ICOMOS 18th General Assembly. L-R: Kate Fernie (2Culture Associates), Holly Wright (Archaeology Data Service), Silvia Alfreider (National Archives of Norway).

The objectives of this workshop were:

- to stimulate discussion and collaboration between curators, experts and stakeholders in digital libraries, cultural heritage, tourism and local communities about new ways to make holdings more widely available;
- to showcase the latest developments in supporting small and medium-sized cultural institutions in making their digitised collections available online, via the Europeana portal, through the LoCloud project.

The event included the following presentations;

- Overview of the LoCloud project, and how local cultural institutions can get involved, *Kate Fernie, 2Culture Associates, UK*
- Overview and demonstration of LoCloud mapping tools and cloud-based services for Europeana, *Dimitris Gavrillis, ATHENA Research Centre, Greece*
- Overview and demonstration of LoCloud Collections: a new collection management system for small to medium sized organisations to make their collections available online, and discoverable within Europeana, *Holly Wright, Archaeology Data Service, University of York, UK*
- Overview and demonstration of geographic location and map based services for local heritage within LoCloud services for Europeana, *Siri Slettvåg, Avinet, Norway*
- Support for communities and cultural tourism, *Silvia Alfreider, National Archives of Norway, Norway*

The workshop raised interesting and lively discussions on the topics addressed and a number of participants showed a specific interest in the project. Moreover, the event was a useful networking exercise, being part of the ICOMOS conference, which attracted a considerable number of International participants from cultural heritage institutions.

LoCloud Hackathon, 11 February 2015

Developers working on applications using Europeana data and a series of services developed by LoCloud.

A LoCloud hackathon was organised by AthenaRC with 2Culture and Europeana, at the Google Culture Institute in Paris on 11 February, in the context of EuropeanaTech. The event gathered 22 developers who worked during the entire day on innovative applications for the cultural heritage sector, using Europeana data and a series of services developed by LoCloud.

The Services included: the MORE repository, the enrichment services, the geolocation service, the historical placenames service, the vocabulary service, and the Wikimedia application.

MoRe Quality by Vangelis Banos ([Future Library](#), Greece) was the winning prototype application.

A website was set up for the hackathon by Athena RC to provide information about the event and the services available at <http://more.locloud.eu/hackathon/index.php?op=home>.

Extensive promotion was carried out by the LoCloud partners before and after the hackathon, which raised a lot of interest in the event, and in LoCloud services. Two articles, one on the event in general, and one on the winning application, were published on the LoCloud web site and in the February newsletter:

<http://www.locloud.eu/News/We-attended-the-LoCloud-Hackathon>

<http://www.locloud.eu/News/LoCloud-Hackathon-winner>

EuropeanaTech2015, 11-13 February 2015, Paris, France

The conference brought together application developers, information professionals, technology researchers and decision makers in the cultural domain, to explore current technical challenges around digitisation and re-use of cultural content, to learn about new developments, and establish future collaborations.

LoCloud partners participated in the conference, within which context the LoCloud Hackathon was organised. The team also held the LoCloud mid-term plenary meeting on 11 February at the National Library of France.

2.3 Means of dissemination

2.3.1 Dissemination materials

A set of promotional materials were prepared and made available for use. These materials include:

- A general poster translated in all partner languages
- A technical poster produced in February 2015, providing an overview of the LoCloud services; translations are being made available

LoCloud D.6.2 Interim Dissemination Report

- A project fact sheet
- A project leaflet
- A LoCloud PowerPoint presentation template

Partners have worked with 2Culture to provide the promotional materials translated in national languages. All materials are made available to members of the project for download from the LoCloud website.

1.1.1 Videos

A video about the LoCloud project was developed and is available on the project web site. The video provides an introduction to the project and services.

A number of videos illustrating the LoCloud microservices are being produced (once the services are finalised) and will be made available on the web site. These will help promote the services, by explaining their use and benefits for small cultural institutions.

2.3.2 Web site

The LoCloud web site (<http://www.locloud.eu/>) was launched by MDR in the first month of the project (March 2013) and is now maintained and developed by 2Culture. The site provides information about the project, and includes an intranet section for members of the project consortium.

LoCloud D.6.2 Interim Dissemination Report

The public area of the web site has been recently expanded and currently includes:

- About – the project, consortium and activities
- News – news bulletins and newsletters
- LoCloud Collections
- Resources – presentations by project partners, publications, dissemination materials, links to related projects and initiatives
- Support – links to the LoCloud support centre, providing access to documentation, learning materials, questions and answers, and help desk
- Events – events of interest to the LoCloud community
- Get involved – a section providing information for small and medium sized organisations interested in joining LoCloud
- Contacts – How to contact the LoCloud project

The project intranet includes:

- Project Reviews
- Reporting
- Deliverables
- Work packages (one folder for each WP)

The web site is made available in English. Where appropriate, project partners have provided translations of some parts of the public pages of the site in their national languages.

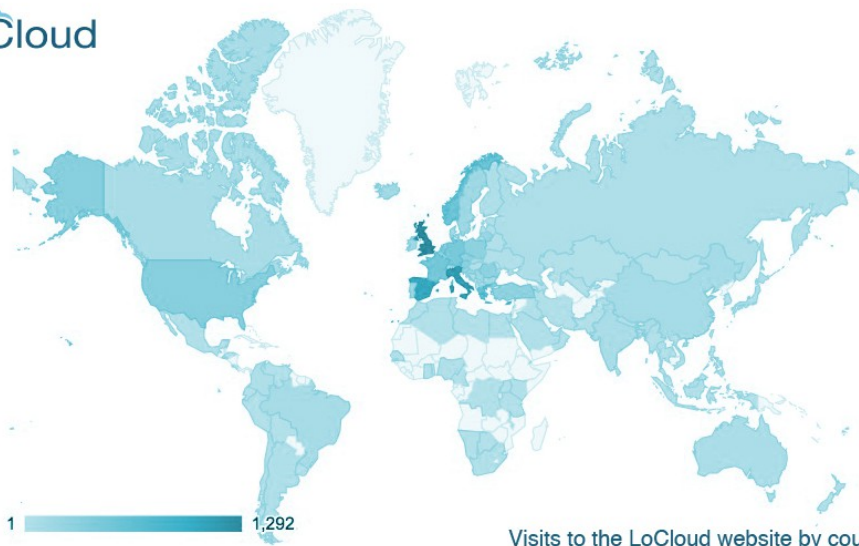

All partners have been encouraged to disseminate information about LoCloud activities and progress on their own institutional web sites, by regularly posting news and providing links to relevant documentation.

Below are some **statistics on access** to the LoCloud web site during the reporting period.

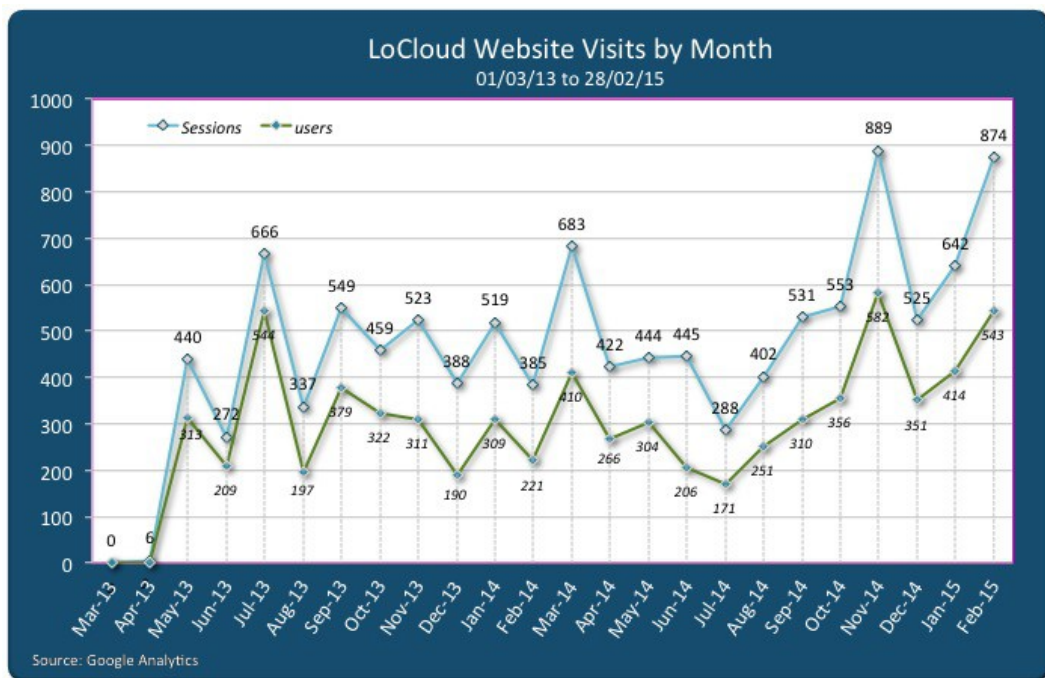

Note: While systems are in place to prevent visits from site administrators (by IP and by website account), these systems are not 100% reliable, and may result in inflated visit counts from the UK. Google Analytics does not record visits from users with JavaScript disabled. There are no accurate figures for the percentage of users with JavaScript disabled, but is generally considered somewhere between 2% to 3%.

Where easily identifiable, data for visits and referrals from crawlers and spambots have been excluded from these results.

LoCloud D.6.2 Interim Dissemination Report

There have been two major spikes of activity on the website resulting from referrals surrounding events at which LoCloud was represented.

EuroMed 2014 conference was held in Limassol, Cyprus on 3-8 November 2014. The Cyprus University of Technology, a partner in LoCloud, was part of the Conference Chairing Committee.

Dissemination activities resulting from the LoCloud project presence at the Europeana Tech 2015 conference held in Paris on 12-13 February 2015.

New vs. Returning Visitors

New Visitor - A visitor who did not have Google Analytics cookies when they hit the first page in thier visit. If a visitor deletes their cookies and comes back to the site, they will be counted as a new visitor.

Returning Visitor - A visitor with existing Google Analytics cookies from a previous visit.

2.3.4 LoCloud Newsletter

The project newsletter is produced twice a year. Editions were issued in August 2013, February and August 2014 and February 2015. They are available from <http://www.locloud.eu/News/Newsletter>.

A summary newsletter is distributed to email lists, and the full newsletter is uploaded to the project website. Notices about the newsletter are posted on social networks and email lists by project partners. Publishing a summary version of the newsletter with links to the full articles sends traffic to the project website.

The latest newsletter (February 2015) was distributed to about 80 recipients, and was actively promoted through social networks.

3. Dissemination activities planned for the final project period

3.1 Events

In the coming months LoCloud will coordinate presentations, poster sessions and workshops at key conferences to promote the results of the project, and the contribution of content to Europeana. Below are a few highlights of external events which LoCloud partners plan to attend. The full list is available as Annex 3.

LoCloud Competition

An international competition is being organised to encourage people to explore a favourite place or part of their local history through [Europeana](#), and present their experience online in the form of web pages, a blog or video.

The competition will have two strands:

"My Local Heritage" for curators, volunteers, local historians, or students to present their experience of exploring their local heritage in Europeana in a short video, blog post or online essay.

"My LoCloud Services", will be a prize for the best implementation or development of LoCloud services, and is open to developers, aggregators and cultural institutions.

The competition will be launched in April 2015, with submission deadline in October 2015.

The finalists will be invited to present their entries at the LoCloud final event, which will be held in Amersfoort, Netherlands on 5th February 2016. All short-listed entries will be promoted on the LoCloud website.

The competition winners will receive a prize and their winning entry will be publicised by LoCloud and Europeana.

Details are published at <http://www.locloud.eu/News/LoCloud-Competition>.

LoCloud Workshop, Granada, Spain

The University of York/ADS is organising a workshop at Digital Heritage 2015 in Granada, 28 September-2 October (<http://digitalheritage2015.org/>), to promote the results of the project. Digital Heritage is a biennial federated world congress held jointly with affiliated international conferences, societies, organisations and exhibitions around IT for heritage. Eleven LoCloud partners have confirmed their participation in the event, and their contribution to the workshop. By that time, most of the LoCloud micro-services will be finalised and a substantial amount of partners' digital collections will be available on Europeana.

TPDL 2015, Poznań, Poland

The International Conference on Theory and Practice of Digital Libraries (TPDL) constitutes a leading scientific forum on digital libraries that brings together researchers, developers, content providers and users in the field of digital libraries. TPDL 2015, the 19th edition of the conference, is organised by Poznań Supercomputing and Networking Centre (partner in

LoCloud) and will be held held in Poznań, Poland on 14-18 September 2015.

3.2 LoCloud planned events until end of project

Meeting/event	Date/Project month	Participants	Location
Workshop at DH2015	28 September-2 October 2015	Selected partners	Granada, Spain
Second technical review	15-16 April 2015	Project management team, WP leaders	Luxembourg, Luxembourg
Final technical review	M36	Project management team, WP leaders	TBD
Final conference and competition awards	5 February 2016	Up to 200 external stakeholders, plus project participants	Amersfoort, Netherlands

3.3 Publications

Partners have been active in promoting the project's results, especially through social networks, blogs, and a few articles published in on-line local newspapers. A full list of the publications for the reporting period is available as Annex 2.

4. Monitoring

Between month 24 and the end of the project (month 36) monitoring activity will be carried out to evaluate the progress and impact of the project's activities planned by March 2016.

Below are the indicators and set targets.

Indicators	Month 36
Number of unique visitors to the website	8,000
Number of followers on social networks	250
Number of newsletter readers	140
Number of presentations by partners in national and international events	50
Number of attended events	40
Number of participants in the Final conference	200

5. Conclusion

This document provides an account of the dissemination activities of the LoCloud project during the first 24 months.

The report shows that a substantial number of dissemination actions have been carried out during the first two years of the project, raising awareness amongst targeted audiences of the project progress and results. This document will be updated in month 36 to produce a final dissemination report, accounting for the promotion and dissemination activities during the entire project period.
